The following is a detailed list of all the courses, and their annual fees that USET intends to offer in the forthcoming academic year, starting 13th October 2025.

There will be some additional costs such as those connected with external examination fees. Details of the courses, equipment and text books required, could be obtained from the relevant departments.

Female Students opting for any of the technical and vocational courses in Engineering and Construction

Technology would enjoy a discount of 30% of the tuition fees. This is to encourage the participation of girls and women in the male-dominated skill areas.

In addition to the main courses listed, USET regularly runs specialised short courses. Advice on this and other matters relating to your further studies can also be obtained from the Career Centre, situated above the USET Library.
